RESmart^{TM} AutoCPAP System

Service Manual

Important

All data in this manual have been verified correctly. It is sufficient for servicing and repairing this device. If applying this manual on other purpose, the validation should be confirmed by BMC Medical Co. Other wise, BMC Medical Co. has no responsibility for the result. All information in this manual is protected by law and regulation. All copyrights are belongs to BMC Medical Co.

INPORTANT, CAUTION AND WARNING in this manual are to emphasize dangers to service people.

WARNING   If do not operate properly, may cause damage to people and environment.

CAUTION   If do not operate properly, may cause damage to instrument.

IMPORTANT   Important information for servicing and repairing.

Safety Notice

Electric Shock
There is above 100VAC voltage inside this device, please be sure to repair device after power off.

Chemical Safety
There may be risk of virus after touching by patient. Please clean device or wear protective glove before servicing and repairing. Please deal with the waste according to regulation. Wash hands by disinfector after operating this device.

Table of Contents

1. Introduction

1.1 <u>Intended Use</u>

The RESmart Auto system is a CPAP (Continuous Positive Airway Pressure) device designed for the treatment of adult Obstructive Sleep Apnea (OSA) only.

The RESmart Auto is to be used only on the instruction of a licensed health care professional. Your home care provider will make the correct pressure settings according to your health care professional's prescription.

This device is not intended for life support.

This service manual is used to help service people maintenance RESmart™ AutoCPAP system of BMC Medical Co. more efficiently. Instructions in this manual may help device work best.

Engineer can find needed instruction from this manual quickly.

IMPORTANT   Read and understand instruction in this manual before operating.

IMPORTANT   RESmart™ AutoCPAP system can not be used for life support.

3. Software

3.1 Instruction for Upgrading Device Software

1. Power off the RESmart CPAP/AutoCPAP device, then connect PC and the device via data cable.

2. Run the software "BMC RESmart Tools for Upgrade" from PC and display as below:

   a) Select the right Upgrade File (for example: version 1.28 for AutoCPAP is "Auto1.28-A.upd).
   b) Select the right serial port, default is COM1.

3. Click "OK", display as below:
   Power on the CPAP/AutoCPAP device. If the device is power on from beginning, please power off the device and turn on again after 5 seconds more.

4. After the device is turned on, the following will display:
Click "Upgrade" to start. If success, the right version number will be displayed on CPAP/AutoCPAP device screen when every power on.

Note: If failed during upgrading, please repeat from above 1-4 steps.

If "Error 08" displayed after software upgrading, it means unmatched software used (for example: apply AutoCPAP software to CPAP device). In this case, apply correct software and upgrade again.

3.2 Hidden Function

1. **Humidifier matching and dis-matching**
    (Available on version 1.19 and later)

    Assemble humidifier on main device, do not apply water tank. Enter maintenance menu, set 'Treat P'=3 and 'Ramp'=40, then press 'On/Off' button when 'Manual P' appears. Thus the humidifier is matched. When 'OK' appears on LCD, humidifier matching successes.

    If cut the power supply after pressing 'On/Off' button when 'Manual P' appears, then the humidifier is dis-matched.

2. **Reset**
    (Available on version 1.28 and later)

    Enter maintenance menu, press 'Ramp' button for 5 seconds more, thus hidden date setting appears. Set 'YYYY/MM/DD'='2097/07/01', press 'On/Off' when 'Hour' setting, thus all device setting and therapy record (not include use time and days) are reset.
    If set 'Minute'='16' during above procedure, then not only device setting and therapy record, but also patient information are reset.
    If set 'Minute'='26' during above procedure, then not only device setting, therapy record and patient information, but also use time and days are reset.

3. **Pressure calibration**

(Available on version 1.20 and later)

Connect pressure meter to the gas outlet in the device, enter hidden date setting, set 'YYYY/MM/DD'='2098/08/08', press 'On/Off' when 'Hour' setting, thus pressure calibration starts. The device increases pressure to 20hPa(cmH2O), AD sampling data will appear on LCD. When LCD data displaying is stable, if pressure meter value is not 20, press '+/-' button to adjust the pressure output. Until output pressure value is 20 and LCD displays stable, press 'On/Off' button to finish pressure calibration.

4. Debug mode

(Available on version 1.19 and later)

Enter hidden date setting, set 'YYYY/MM/DD'='2099/08/02(or 03)', press 'On/Off' when 'Hour' setting, thus debug #02 or #03 mode starts. The device can send real time data to computer via serial port. Only cutting off power supply can make device back to normal mode.

4. Malfunction and Countermeasure

4.1 Malfunction Determination

Components Illumination

1. Device Inside
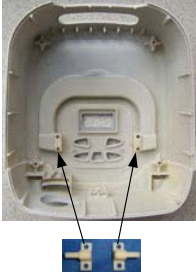

S/N	Assembly	Figure
1	Insert humidifier locker on the shield bottom.	
2	Insert humidifier power supply reed on the shield bottom as per Fig. E and F.	Orange Black
3	Assembly the humidifier locker and button spring.	
4	Put fixing on the spring and fix by screw (2×3mm*8mm).	
5	Put power wire.	Power wire to humidifier
6	Assembly the shield back on the bottom, fix by screw (2×3mm*8mm).	
7	Assembly foam (bottom) into shield bottom.	
8	Assembly AC power socket on the shield back (character face up).	

| 9	Clean up the wire.	
10	Assembly power PCBA in the socket and connect all plugs. Clean up the wire.	
11	Connect outlet to blower connector, fix by clip.	
12	Connect blower to connector and fix by clip. Put the integrated one in the right place.	
13	Covered by foam cover and clean up wires.	
14	Assembly fixing clip on the main board PCBA.	PCBA Fixing Clip Pressure Sensor
15	Plug the 8-pin plug of blower in the socket PM plug #2 as in Fig. E in the socket P24 on the main board PCBA.	
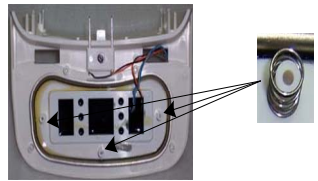

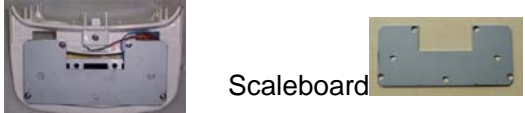

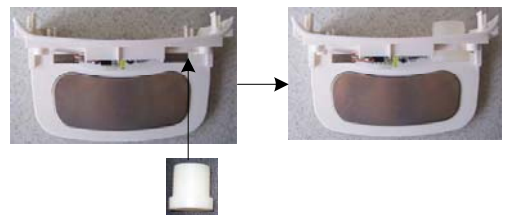

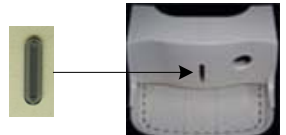

S/N	Assembly	Figure
16	Assembly the main board PCBA on fixing pole and make sure the clip clamps power PCBA.	PCBA Fixing Pole
17	1. As per Table 1, connect sensor YL to outlet by silicon rubber canal. 2. Connect sensor LL to outlet by silicon rubber canal.	12cm canal for YL sensor 8cm canal for LL sensor 12cm canal for LL sensor

2. Device Outside

S/N	Assembly	Figure
18	Put handle in the socket on shield cover.	

19	Assembly handle fixing to handle and fix by screw (4×3mm*8mm).	
20	Assembly the infrared window.	Infrared Window
21	Assembly and fix the panel.	
23	Put on the key button.	
24	Assembly shield cover on the bottom, adjust the position of outlet and make sure it is clamped in the right socket.	
25	Fix the shield by screws (4×M3*10mm).	Screw Hole
26	Stick four device pads.	Device Pad
27	Put in filter and assembly the cover.	
28	Put on all plugs if necessary (without humidifier).	Plug (up) / Power plug / Plug (down)

3. Humidifier

S/N	Assembly	Figure
1	As per Fig. H, assembly the heater plane and wire. Fix them by screw (3mm*8mm).	Black ———► Orange
2	Put spring on each of three poles on heater plane.	
3	Assembly the scaleboard on the heater plane and fix by screw (3mm*8mm).	Scaleboard
4	As per Table 3, assembly heater PCBA and wires.	
5	Put the humidifier inner connector on the shield.	
6	Put on light window.	
7	Assembly the inner and outer shield.	

8	Fix on screw (M3*10mm).	Screw
